### TRANSCULTURAL CONCEPTS IN NURSING CARE

Margaret M. Andrews and Joyceen S. Boyle

Second Edition 1995 ISBN 0-397-55115-0  
J.B. Lippencott Company

Transcultural issues often play a vital role in the delivery of effective nursing care. *Transcultural Concepts in Nursing Care* (Second edition) applies theory to practice in this fascinating area of the nurse-client relationship. The authors explore cultural diversity by subculture, region, and race as well as issues pertaining to intermingling of ancestry, migration, and intermarriage.

The text's three sections - *Transcultural Nursing: Theoretical Perspective*, *A Developmental Approach to Transcultural Nursing*, and *Clinical Topics and Issues in Transcultural Nursing* - draw upon the natural and behavioral sciences to apply the principles of transcultural nursing to patients of all ages in a variety of commonly encountered clinical situations.

This edition's completely updated content effectively integrates the latest research findings. Chapters on international nursing and nursing in the community have been added. Androgic aids including learning activities, research boxes, and case examples illuminate key topics and offer practical applications. A well-structured and thoughtful approach to this expanding area of nursing.
