RE: Statistical consultation on research project

I consulted with Lebogang Seutlwadi and Prof Catriona Macleod regarding the statistical analyses for this project all the way through the project and I am satisfied that the statistical analyses conform to the standards required for surveys of this nature.

I have a Master's Degree in Research Psychology and I have lectured in the fields of quantitative research methodology and behavioural statistics at Rhodes University since 1998. This has included both undergraduate and post graduate students and covered material from basic statistics through to multivariate statistics.

Yours sincerely,
